PROFESSIONAL EXPERIENCE

Founder / Lead Engineer — LESS (Less Electric Self-driving System)

Mar 2026 – Present

Independent · Lagos, Nigeria

- Building a modular autonomy platform on two tracks: a retrofit vehicle autonomy stack (sensors, control systems, drive-by-wire) and a crowdsourced, nationwide road-conditions and routing platform for Nigeria.
- Developed ESP32 vehicle-control-unit firmware in Rust/Embassy with an MQTT-based control architecture, including a waypoint autonomy node.
- Designed and largely implemented the backend for the road-data platform, including live-traffic ingestion and a conditions/routing feed.
- Demonstrated core autonomy concepts through a cafeteria delivery robot prototype to showcase engineering capability to stakeholders in Nigeria's automotive/EV space.

Fellow – Rust / Libp2p BtLE Transport

Jan 2026 – Mar 2026

Protocol Labs / PLDG

- Developed a Bluetooth Low Energy (BtLE) transport implementation for Libp2p in Rust, enabling peer-to-peer connectivity over BtLE channels.
- Authored a draft specification for the BtLE transport protocol, covering connection establishment, framing, multiplexing, and security handshake.
- Wrote supporting implementations and integration tests across multiple device platforms (Linux, embedded targets), validating spec compliance and interoperability.

Backend Engineer

Jul 2024 – Dec 2025

Missionsync

Canada

- Architected and bootstrapped the monorepo structure and service layout and models for the company's core platform.
- Implemented a background job runner handling dozens of concurrent AI and system tasks daily.
- Delivered production features directly from documentation while providing architectural review input.

Software Engineer

May 2023 – Oct 2023

Kudipal

Lagos, Nigeria

- Contributed to a national-scale e-ticketing and payment infrastructure deployed across public transport systems.
- Built secure cross-border B2B payment APIs used by both SMEs and enterprise clients.
- Provided tier-2 technical support, resolving integration issues within hours of report.

Frontend Developer

Oct 2022 – Mar 2023

Dukia

Lagos, Nigeria

- Implemented UI components for a Web3 NFT marketplace with optimized animations and modular components.
- Integrated on-chain data through JSON-RPC and backend microservices.

Blockchain Developer

Mar 2022 – Sep 2022

Cryptosmart

PH, Nigeria

- Developed smart contracts across Solana, Algorand, and EVM chains using Rust, Python, and Solidity.
- Wrote unit tests ensuring contract safety and deterministic behavior.

Systems Software (Go, Rust, Node.js, AI)

2023 – 2025

Freelance & Contracts

Remote

- AI Backend Engineer – Cleverfolks (UK): Designed an AI business assistant automating 100+ background workflows.
- Systems Engineer – IfaLabs: Built a Go-based orchestrator aggregating real-time price feeds across multiple blockchains.
- Privachain: Privacy layer parachain for payment, data ownership using zkSNARKS. Wrote circuits with circom and migrated to arkworks.

Selected Personal Projects: Payv (Rust, Substrate): decentralized payment protocol; Hinet (Rust): decentralized p2p communication using libp2p; TradingSim (C++) order book; Xarvis (Go, LangGraph): AI reasoning engine; NeuralNet/Xzam (Python, Rust): neural net & Shazam-style audio fingerprinting; Toy OS/Raft/KV DB (C++, Go): systems & distributed computing; Delivr/FAS: logistics & IoT solutions (fingerprint attendance system).

LEADERSHIP AND VOLUNTEER EXPERIENCE

- Asst Course Representative, Obafemi Awolowo University — Nigeria (Sep 2024 – Present): Managed registration and coordination for over 120 students, streamlining departmental communication.
- Neuromorphic Computing Research, Obafemi Awolowo University — Nigeria (Jun 2025 – Present): Supervised as team lead an 8-member SIWES group exploring Hebbian-based Spiking Neural Networks (SNNs) using Brian2 and Vivado suites.

CERTIFICATIONS

- Introduction to Embedded AI Workshop (Erasmus+), Oct 2023 – May 2024: Guided peers through embedded AI modules and hardware-software integration labs.
- IBM Qiskit: Introduction to Quantum Computing, Jun 2025: Completed 23/24 cohort among top participants.

SKILLS & INTERESTS

Languages & Tools: Rust, Go, Node.js (TypeScript), C++, Python, Solidity, Prisma, Docker, Redis, PostgreSQL.

Domains: Blockchain, Distributed Systems, AI Agents, Systems Programming, Hardware-Software Integration.

Interests: Futuristic Tech, Music, Cognitive Systems, AGI research, Writing.
